

# Maciej Wilk

[ma-chey vilk]

## Profile

Hi! I'm looking for new opportunities to collaborate on creating beautiful code (that's easy to maintain!) in my favourite technology - Ruby on Rails. Years of experience in the field led me to embrace simplicity and readability over "clever" solutions. I enjoy both: deep-focus work and pair programming sessions with my teammates. Let's build stuff together!

## Experience

Senior Ruby on Rails developer, **Lumenalta**; remote - 2024-2025

Working as a consultant and contributor on two different projects. This required a lot of coordination with the clients to get the work requirements and agree on proposed solutions. Areas I contributed to included: improving stability and observability, introducing updated solutions while maintaining backwards compatibility, working with frontend/mobile teams to support new features.

Senior Ruby on Rails developer, **Smily** (formerly BookingSync); remote - 2019-2024

Part of team working on integrations with external partners (mostly Airbnb and Vrbo). Lots of experience with handling data synchronisation between internal micro-services (using RabbitMQ, Kafka and "regular" REST API calls) and external partners (exposing XMLs to crawlers, REST and GraphQL APIs). I also collaborated closely with other teams to introduce new features and customer care team to provide tech support.

Ruby on Rails developer, **InFakt**; Kraków, Poland - 2018-2019

Working on one of the top accounting SaaS' in Poland. Lots of legacy code to maintain and add new features to, but also some opportunities for green-field work with introduction of micro-services (2FA app using Roda).

Ruby on Rails & QA engineer, **USEO**; Wrocław, Poland / remote - 2015-2018

Software company focused on writing web apps for startups; got my first commercial Ruby experience there working in 3 separate projects, later transitioned into a QA role.

## Education

Wrocław University of Technology; Wrocław, Poland – Computer Science, 2015

## Skills

- Ruby - mostly Ruby on Rails, some Roda and Brut RB experience
- Kafka and RabbitMQ
- HTML + CSS + Javascript (ES6, TypeScript, some React)
- Docker and Kubernetes
- using AI Agents for productive coding (Cursor, Zed, VS Code + Copilot)
